## BEAN SPROUTING HOUSE

### YOU'LL NEED:

- 1-2 bean seeds
- Paper towel
- Ziploc bag
- Tape
- Bean house pattern
- Sunny window

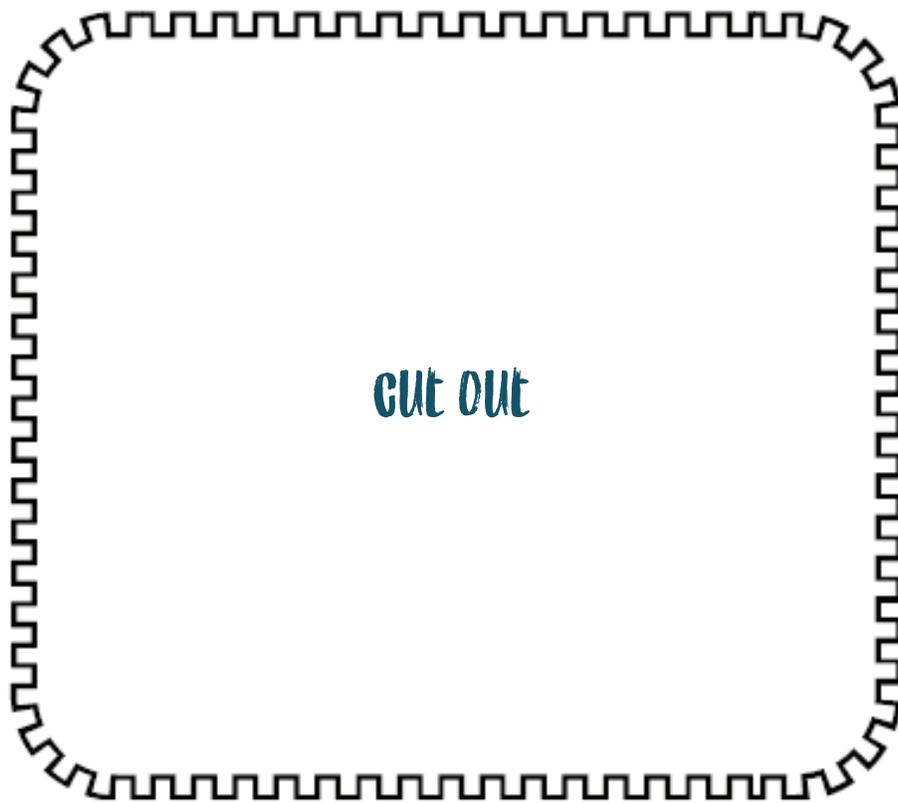

### INSTRUCTIONS:

1. Cut out the printable bean house pattern attached to this activity sheet, and write your name on the blank line at the top. Decorate your house with markers or crayons, if you like.
2. Moisten the paper towel so that it is wet but not dripping.
3. Fold the paper towel in half, and then in half again.
4. Place the paper towel in the Ziploc bag, then place the seed in the bag between the wet paper towel and the plastic.
5. Close the bag, and tape it to the inside of the bean house cutout.
6. Hang in a sunny window. Your bean should start sprouting in 2-3 days. If you notice any mold growth on the paper towel, carefully change it out for a new towel.
7. As your sprout gets larger, you can transfer it to a can or container filled with dirt or potting soil so it continues to grow.
