GLITTER GERM EXPERIMENT FOR KIDS

YOU'LL NEED:

- Shallow dish
- Water
- Colored dish soap
- Glitter

INSTRUCTIONS:

1. Pour water into the shallow dish, almost to the edge.
2. Sprinkle glitter into the water (the glitter represents germs). Glitter can also be substituted for cocoa powder or edible food glitter.
3. Add 2 to 3 drops of dish soap, and watch the germs quickly move away. The more soap added, the faster the reaction.

PUN TIP:

- You can also coat your child's finger in soap and have them try to touch the "germs."
