MAKE YOUR OWN LAVA LAMP

YOU'LL NEED:

- Clear plastic bottle with lid
- Vegetable oil (2 tablespoons)
- Water
- Food coloring of your choice
- Salt
- Glitter (optional)

INSTRUCTIONS:

1. Fill the bottle up 2/3 of the way with water.
2. Add drops of food coloring until you like the color you see. A few drops will go a long way, and lighter colors will make it easier to see the lava.
3. Sprinkle in glitter for a bit of extra sparkle (optional).
4. Place the lid back on the bottle and shake to mix.
5. Pour vegetable oil into the bottle, and wait for the oil and water to separate.
6. Pour salt into the jar until you see the cool lava lamp effect. When the bubbles stop, add more salt to see it again.

PUN TIP:

Shine a flashlight behind the jar to watch your lava lamp really glow!
